

Azure

Microsoft Azure is a set of continually growing and evolving set of cloud services and platform on which today's forward-thinking business can build and implement tools and applications, on-premises and in the cloud.

Security and privacy features are in-built, and Microsoft delivers industry-leading regulatory and compliance functionality, while Azure offers scope for the limitless development of scalable, compute and storage services

We've created some Azure guides, and compiled a selection of high-quality Microsoft documents - see below or search the directory on the left.
